LUKOIL OPENS LUBRICANTS PLANT IN KAZAKHSTAN

Today Prime Minister of Kazakhstan Askar Mamin and President of PJSC LUKOIL Vagit Alekperov have opened a new lubricants plant in the Almaty region (Republic of Kazakhstan) with an annual output of 100,000 tons. The plant will produce more than 800 different lubricants, including LUKOIL GENESIS that features innovative molecular technology and is approved by the world major automobile makers.

The location of the facility makes it possible to optimize the logistics of LUKOIL's lubricants supplies in Kazakhstan and other countries of Central Asia. The highest level of process automation allows for producing and shipping lubricants to the customer within 24 hours while the laboratory equipped to the latest standards guarantees the highest quality of products.

The project was implemented in strict compliance with the legislation of the Republic of Kazakhstan and international health, safety and environment standards. The plant was designed and built having in mind the potentially high seismic activity at the site.

The lubricant plant will offer more than 200 jobs for citizens of Kazakhstan, including graduates of Kazakh universities.

Information:
LUKOIL has been operating successfully in Kazakhstan since 1995. The Company participates in 4 producing projects: Kumkol (Kumkol and East Kumkol fields), Karachaganak (one of the largest oil and gas condensate fields in the world), Tengiz (Tengiz and Korolevskoye fields) and Zhenis (a joint project between JSC NC KazMunayGaz and TOO LUKOIL Kazakhstan Upstream) as well as takes part in the Caspian Pipeline Consortium (CPC), the only private trunk pipeline in Russia and Kazakhstan.
