LUKOIL'S POWER AND HEAT SUPPLY NETWORKS READY FOR HEATING SEASON

All LUKOIL Group's power and heat supply companies have obtained 2021 – 2022 winter preparedness certificates from the Ministry of Energy of the Russian Federation.

The company's power facilities with total installed capacity of 4.9 GW have timely completed the whole scope of works of the winterization schedule for the entire network of 27 thousand kilometers of the power transmission grid and 2.1 thousand kilometers of heat supply lines.

Advanced survey technologies and use of robots, providing for a significant increase of the quality of technical diagnostics, made it possible to replace twice as many sections of lines, supplying heat to various sites, social facilities among them, as last year.

Testifying compliance of LUKOIL's power and heat facilities with technical requirements, winter preparedness certificates prove them ready for seamless supply of power and heat to consumers in this heating season.
